

Módulo 3:

Context Engineering

CLAUDE

COZE

Recap:

1- LLM Stateless + Claude Code

2- Setup + CLAUDE.md

Context Window

The context window

Everything the model can see when it generates the next response

The 1M tokens is a safety margin, not an invitation to fill the entire context.

Magic Skills

Write like a caveman

Magical Github Repos

Magical MCPs

Better Context =

Token

Savings

Context Engineering

- **M**easure
- **O**ptimize
- **C**odify

Measure

- `/context`
- `/usage`
- `/insights`

Performance

Context

Optimize

- `/compact`
- `/rewind (esc esc)`
- `/clear`
- Subagents

Context window

The window is finite — when it fills, compact into a summary and keep working

/compact

/rewind (esc, esc)

Clean Context

Correcting

context = reads + 2 failed attempts + 2 corrections + the fix

Rewinding

context = reads + one informed prompt + the fix

Rule: New Task = New Session

Action	Command	Why
Just shipped a feature, now writing its docs	Continue	Files and decisions already loaded
Fixed a bug, now writing tests for it	Continue	Fix reasoning is directly relevant
Long debug session found root cause, now implementing fix	<code>/compact</code>	Keep the decision, drop the exploration trail
40+ turns deep, approaching context limit mid-task	<code>/compact</code>	Lossy summary beats losing the session
Finished backend work, switching to frontend styling	<code>/clear</code>	Different mental model, no shared signal
Done with a ticket, starting a new unrelated one	<code>/clear</code>	Stale context only adds noise

My Context Management Rules

- Related Follow-up = Continue
- Task Done, Momentum Matters = /compact
- New Task = New Session → /clear
- Wrong Path = Rewind → /rewind

SubAgent

Codify

- **worktrees**
- **Plan Mode (Opusplan)**
- **CLAUDE.md**
- **Subagents + Skills**

Gracias!
